## Chart 2-1. Aged beneficiaries accounted for the greatest share of the Medicare population and program spending, 2013

Note: ESRD (end-stage renal disease). The “aged” category includes beneficiaries ages 65 and older without ESRD. The “disabled” category includes beneficiaries under age 65 without ESRD. The “ESRD” category includes beneficiaries with ESRD, regardless of age. Results include fee-for-service, Medicare Advantage, community-dwelling, and institutionalized beneficiaries. Totals may not sum to 100 percent due to rounding.

THIS CHART REFLECTS MEDPAC ANALYSIS OF THE 2013 MCBS COST AND USE FILES, WHICH ARE THE MOST RECENT AVAILABLE. (THERE ARE NO MCBS DATA FOR 2014.) THE READER IS ADVISED TO CONSULT THE 2015 MCBS DIRECTLY, WHEN THE COMPLETE SURVEY BECOMES AVAILABLE, FOR THE MOST CURRENT VERSION OF THESE DATA.**

- In 2013, beneficiaries ages 65 and older without ESRD composed 82.7 percent of the beneficiary population and accounted for 75.6 percent of Medicare spending. Beneficiaries under 65 with a disability and beneficiaries with ESRD accounted for the remaining population and spending.
- In 2013, average Medicare spending per beneficiary was \$11,239 (data not shown).
- A disproportionate share of Medicare expenditures is devoted to Medicare beneficiaries with ESRD. On average, these beneficiaries incur spending that is more than seven times greater than spending for aged beneficiaries (ages 65 years and older without ESRD) or for beneficiaries under age 65 with disability (non-ESRD). In 2013, \$72,725 was spent per ESRD beneficiary versus \$10,265 per aged beneficiary and \$12,776 per beneficiary under age 65 enrolled because of disability (data not shown).

- For the aged population (65 and older), per capita expenditures increase with age. In 2013, per capita expenditures were \$8,506 for beneficiaries 65 to 74 years old, \$12,416 for those 75 to 84 years old, and \$15,138 for those 85 or older (data not shown).
- In 2013, per capita expenditures for Medicare beneficiaries under age 65 who were enrolled because of end-stage renal disease or disability were \$14,063 (data not shown).

### Chart 2-3. Beneficiaries who reported being in poor health accounted for a disproportionate share of Medicare spending, 2013

Note: Results include fee-for-service, Medicare Advantage, community-dwelling, and institutionalized beneficiaries. Totals may not sum to 100 percent due to rounding and exclusion of an “other” category.

- In 2013, most beneficiaries reported fair to excellent health. Fewer than 10 percent reported poor health.
- Medicare spending is strongly associated with self-reported health status. In 2013, per capita expenditures were \$6,382 for those who reported excellent or very good health, \$13,500 for those who reported good or fair health, and \$24,131 for those who reported poor health (data not shown).

**Chart 2-4. Enrollment in the Medicare program is projected to grow rapidly through 2030**

Note: Enrollment numbers are based on Part A enrollment only. Beneficiaries enrolled only in Part B are not included.

Source: The annual report of the Boards of Trustees of the Medicare trust funds 2017.

- The total number of people enrolled in the Medicare program will increase from 56 million in 2016 to about 81 million in 2030.
- The rate of increase in Medicare enrollment will accelerate until 2030 as more members of the baby-boom generation become eligible, at which point it will continue to increase, but more slowly, after the entire baby-boom generation has become eligible.

## Chart 2-5. Characteristics of the Medicare population, 2015
